

Visualization for Geo Sciences

David Pugmire (ORNL)

Visit and ADIOS

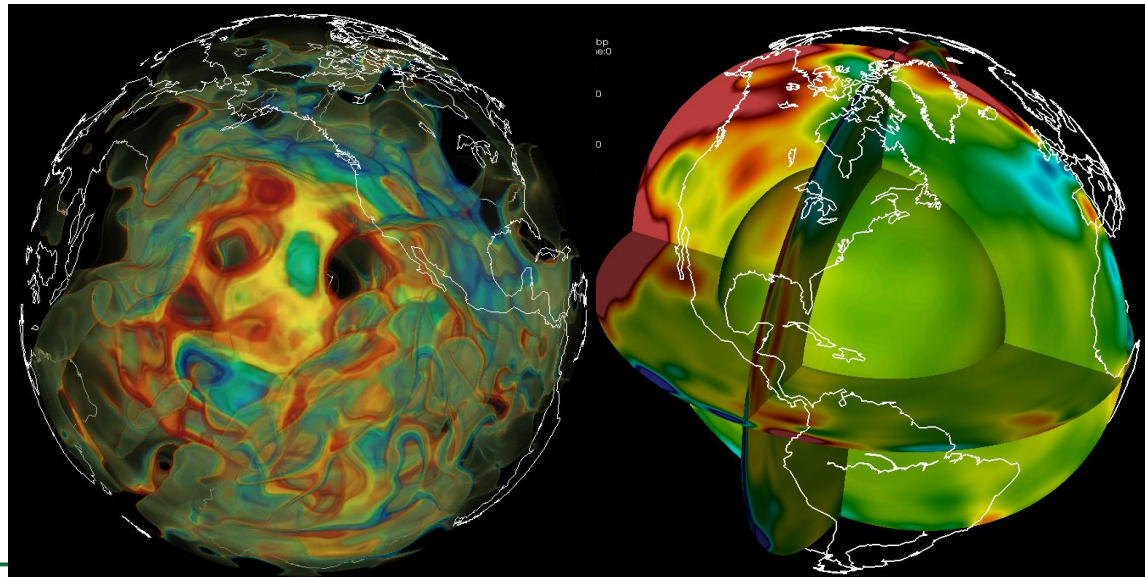

- **Visit:** Large data parallel visualization tool
 - Rich set of visualization and analysis plots and operations
 - Plug-in API allows for easy extension
- **ADIOS:** adaptable I/O framework
 - Provides portable, fast, scalable, easy-to-use, metadata rich output with a simple API

Result/Impact

- Developed a parallel SpecFM3D ADIOS reader for their data
- Providing comparative analysis with the mesh interpolation capability in Visit
- Parallel analysis and visualization possible now on whole earth geo science simulations

Future Directions

- Development of feature detection and comparative analysis algorithms
- Development of geo-science centric rendering and analysis techniques
- ADIOS Visualization Schema for post processing needs

Visualization of data from SpecFM3D. Simulation by J. Tromp (Princeton)
